Education

Yenepoya School of Engineering & Technology

B.Tech Computer Science Engineering

September 2024 – Present

Mangalore, India

Pursuing an industry-integrated program focused on software engineering, AI, and real-world projects from the first year through the Kalvium curriculum.

Asian International Private School (CBSE)

12th Grade (Senior Secondary Education)

2021

Abu Dhabi,

Completed with 90% in 2021.

United Arab Emirates

Asian International Private School (CBSE)

10th Grade (Secondary Education)

2019

Abu Dhabi,

Completed with 82% in 2019.

United Arab Emirates

Skills

Programming Languages

- Python
- C++
- Java
- Ruby

Data & Machine Learning

- Pandas
- NumPy
- scikit-learn
- Tensor Flow
- SQL
- Matplotlib
- Seaborn

Web Technologies

- HTML
- CSS
- JavaScript
- React
- Node.js
- Express.js
- MongoDB
- SQL
- Tailwind CSS
- Ruby on Rails

Tools & Software

- Git
- GitHub
- VS Code
- MySQL
- Linux

Profile

Aspiring software engineer pursuing BTech in Computer Science & Engineering at YSET through the Kalvium program. Passionate about coding, problem-solving, and building impactful tech solutions with a strong foundation in C++, Python, and web technologies.

Certificates

- Python Data Structures 🔗
- Using Python to Access Web Data 🔗
- Ethical Hacking 🔗

Projects

Python Password Manager (SQL) [↗](#)

Created a Python-based Password Manager with MySQL integration, featuring secure credential storage, master password access, and basic CRUD operations in a terminal interface.

Personal Portfolio Website [↗](#)

Designed and developed a responsive personal portfolio using HTML, CSS, and JavaScript to showcase projects, skills, and contact information. Hosted the project on GitHub to demonstrate version control and deployment practices.

Simon Says Game [↗](#)

A memory-based interactive game using HTML, CSS, and JavaScript. Players follow and repeat an increasingly complex pattern of colors and sounds. Demonstrates DOM manipulation, event handling, and game logic using pure JavaScript.

API Integration Project [↗](#)

Developed a simple web application using HTML, CSS, and JavaScript that fetches and displays random dog or cat images using public APIs. Highlights skills in API integration, asynchronous JavaScript (fetch), and responsive UI design.

Express.js Simple Server API [↗](#)

Built a basic RESTful API using Node.js and Express.js to handle HTTP requests and serve JSON responses. Demonstrates understanding of routing, middleware, and server-side architecture fundamentals and hosted on **render** [↗](#) .

Y-SCAM (Frontend) [↗](#)

Modern web interface for **YSCAM** — a scam verification platform that helps users check the authenticity of job and loan offers. Integrates with the ML API to deliver real-time scam analysis and user feedback.. Hosting is done on **vercel** [↗](#) .

Scam Detection ML (API) [↗](#)

RESTful API for detecting fraudulent job and loan messages using machine learning. Powers the YSCAM platform by analyzing text and document inputs for scam indicators using trained ML models (logistic regression). Hosted on **render** [↗](#) .
